

Mahatma Phule Shikshan Sanstha's  
KARMAVEER BHAURAO PATIL COLLEGE,  
URUN-ISLAMPUR

*Department of Physics*

(2024-25)

*Course Outcome's*

**B.Sc. (PHYSICS)-I**

**Course Outcomes: B.Sc. I Paper I: DSC-1 A MECHANICS**

**By the end of this Course student should be able to know about:**

|             |   |
|-------------|---|
| <b>CO1:</b> | Students are able to understand and identify scalar and vector physical quantities in mechanics   |
| <b>CO2:</b> | Students are able to understand and apply vector algebraic methods to elementary exercises in mechanics   |
| <b>CO3:</b> | Students are able to understand and apply basic concepts of rotational motion   |
| <b>CO4:</b> | In general, students are capable of correlating above concepts and methods in mechanics to both theoretical and experimental domains revealing analytical as well as numerical skills |

**B.Sc. I Paper I: DSC-2A ELECTRICITY & MAGNETISM-I**

**By the end of this Course student should be able to know about:**

|             |  |
|-------------|--|
| <b>CO1:</b> | Students are able to understand the physical significance of gradient, divergence and curl   |
| <b>CO2:</b> | Students are able to apply concepts in vector calculus such as gradient, divergence and curl related to vector and scalar fields using Gauss, Stokes and green's theorem |
| <b>CO3:</b> | Students are able to understand and apply concepts of electrostatic field, potential to point charges, electric dipole and geometrically regular charged bodies          |
| <b>CO4:</b> | Students are able to understand and apply concept of energy density in electric field  |

|  |  |
|--|--|
| <b>CO5:</b>  | Students are capable of applying above concepts to solve numerical exercise in electrostatics  |
| <b>B.Sc. I Sem-I: DSC- PHYSICS Practical -I</b>                        |  |
| <b>By the end of this Course student should be able to know about:</b> |  |
| <b>CO1:</b>  | Apply fundamental mechanical principles: Utilize concepts like moment of inertia, simple harmonic motion, and gravity to design and conduct experiments, analysing and interpreting results.   |
| <b>CO2:</b>  | Develop experimental skills: Demonstrate competence in setting up apparatus, taking precise measurements, and calculating uncertainties, understanding limitations and sources of error.   |
| <b>CO3:</b>  | Explore electrical components and circuits: Classify and characterize resistors, capacitors, and galvanometers based on their properties and roles in circuits, measuring resistance and magnetic field strength.                        |
| <b>CO4:</b>  | Investigate wave phenomena and their interactions: Analyze the behavior of sound waves in different media (magnetic vs. non-magnetic), employing a sonometer to determine frequency and comprehend the influence of material properties. |
| <b>B.Sc. I Paper III: DSC-1B PROPERTIES OF MATTER</b>                  |  |
| <b>By the end of this Course student should be able to know about:</b> |  |
| <b>CO1:</b>  | Students are able to revise basic concepts such as stress, strain and elastic constants of elasticity  |
| <b>CO2:</b>  | Students are able to derive elastic constants for beam supported at both ends and at one end   |
| <b>CO3:</b>  | Students are able to derive elastic constant ( $\eta$ ) of a wire under torsional oscillations (Searle's Method)   |

|              |  |
|--------------|--|
| <b>CO4:</b>  | Students are able to explain the phenomenon of surface tension on the basis of molecular forces  |
| <b>CO5:</b>  | Students are able to derive the relation between surface tension and excess pressure   |
| <b>CO6:</b>  | Students are able to perform an experiment to determine ST by Jaeger's method  |
| <b>CO7:</b>  | Students are able to discuss and state the factors affecting the ST  |
| <b>CO8:</b>  | Students are able to understand fluid dynamics and its applications  |
| <b>CO9:</b>  | Students are able to understand viscosity and experimental determination of coefficient of viscosity of liquid by Poiseuille's method                                    |
| <b>CO10:</b> | Students are able to understand effect of temperature and pressure on viscosity of liquid.   |
| <b>CO11:</b> | In general, students are capable of correlating above concepts and methods to both theoretical and experimental domains revealing analytical as well as numerical skills |

### **BSc. I Paper III: DSC-2B ELECTRICITY & MAGNETISM-II**

#### **By the end of this Course student should be able to know about:**

|             |  |
|-------------|--|
| <b>CO1:</b> | Students are able to understand importance of complex numbers in analysis of AC Circuits containing Inductance(L) Capacitor(C) and Resistance (R) and their various configurations |
| <b>CO2:</b> | Students are able to define and apply the concepts in AC circuits such as Impedance (Z), reactance ( $X_C$ and $X_L$ ), Admittance, Susceptance and Quality Factor (Q)             |
| <b>CO3:</b> | Students are able to understand and design AC bridge: Owen's Bridge  |
| <b>CO4:</b> | Students are able to understand basic working principle of Ballistic galvanometer  |
| <b>CO5:</b> | Students are able to define constants of ballistic galvanometer  |

|  |   |
|--|---|
| <b>CO6:</b>  | Students are able to understand the explain the phenomenon of hysteresis in magnetism   |
| <b>CO7:</b>  | Students are able to discriminate different magnetic materials based on their characteristic properties   |
| <b>BSc. I Sem-II: DSC- PHYSICS Practical -II</b>                       |   |
| <b>By the end of this Course student should be able to know about:</b> |   |
| <b>CO1:</b>  | Master mechanical measurements and principles: Utilize advanced techniques like Poiseuille's method, bending, and vibration to measure viscosity, Young's modulus, and Poisson's ratio, demonstrating understanding of fluid dynamics and elasticity. |
| <b>CO2:</b>  | Analyze surface tension and its impact: Employ Jaeger's method to investigate surface tension, recognizing its role in various phenomena and its dependence on material properties.   |
| <b>CO3:</b>  | Explore AC circuits and impedance: Analyze the behavior of series and parallel LCR circuits, measuring impedance and comprehending the influence of individual components (L, C, R) on resonance and phase relationships.                             |
| <b>CO4:</b>  | Investigate bridge circuits and transformers: Utilize a B.G. bridge to determine unknown resistances and delve into the principles and applications of transformers, understanding their role in AC power transmission and voltage transformation     |

### **B.Sc. (PHYSICS)-II**

**Course Outcomes: B.Sc. II Paper V: DSC- C1THERMAL PHYSICS & STATISTICAL MECHANICS-I**

|  |  |
|--|--|
| <b>By the end of this Course student should be able to know about:</b>           |  |
| <b>CO1:</b>  | Highlight different types of velocities of gas molecules.                                |
| <b>CO2:</b>  | Acquire Knowledge of Maxwell's distribution of gas molecules.                            |
| <b>CO3:</b>  | Visualize Merits and drawbacks of thermometers.  |
| <b>CO4:</b>  | Apply knowledge of thermodynamic processes in design of heat engine                      |
| <b>BSc. II Paper VI: DSC- C2 WAVE AND OPTICS -I</b>                              |  |
| <b>By the end of this Course student should be able to know about:</b>           |  |
| <b>CO1:</b>  | Apply superposition principle to develop mathematical model of harmonic oscillators.     |
| <b>CO2:</b>  | To develop the mathematical model for coupled oscillations.                              |
| <b>CO3:</b>  | Understand the ultrasonic waves and their applications.                                  |
| <b>CO4:</b>  | Use of Basic principles of sound in context of acoustics of buildings                    |
| <b>BSc. II Paper VII: DSC- D1 THERMAL PHYSICS &amp; STATISTICAL MECHANICS-II</b> |  |
| <b>By the end of this Course student should be able to know about:</b>           |  |
| <b>CO1:</b>  | Develop Conceptual clarity of thermodynamic functions and Clausius - Clapeyron equation. |
| <b>CO2:</b>  | Appreciate the problem associated with the black body radiation spectrum.                |
| <b>CO3:</b>  | Know, how the problems can be solved by using Planck's law of radiation.                 |
| <b>CO4:</b>  | Acquire preliminary knowledge of classical and quantum statistical mechanic              |
| <b>BSc. II Paper VIII: DSC- D2 WAVE AND OPTICS -I</b>                            |  |
| <b>By the end of this Course student should be able to know about:</b>           |  |

|  |  |
|--|--|
| <b>CO1:</b>  | <b>Draw ray diagrams to demonstrate Cardinal points.</b>                                       |
| <b>CO2:</b>  | <b>Determine the resolving power of prism and grating by making use of Rayleigh criterion.</b> |
| <b>CO3:</b>  | <b>Qualitatively study phenomenon of polarization of light.</b>                                |
| <b>CO4:</b>  | <b>Apply phenomenon of interference of light for determination of its wavelength.</b>          |
|  |  |
|  |  |
| <b>BSc. II Sem-III &amp; IV: DSC- PHYSICS Practical - III &amp; IV</b> |  |
| <b>By the end of this Course student should be able to know about:</b> |  |
| <b>CO1:</b>  | <b>Acquire skills in setting up of optics experiments.</b>                                     |

|             |   |
|-------------|---|
| <b>CO2:</b> | <b>Develop the practical skills and techniques for accurate measurements.</b> |
| <b>CO3:</b> | <b>Acquire observational skills</b>   |
| <b>CO4:</b> | <b>Determine Least counts of different measuring instruments</b>              |

| <b>B.Sc. (PHYSICS)-III</b>  |   |
|---|---|
| <b>B.Sc. III Paper IX DSC- E1 MATHEMATICAL PHYSICS &amp; CLASSICAL ELECTRODYNAMIS</b> |   |
| <b>By the end of this Course student should be able to know about:</b>                |   |
| <b>CO1:</b>   | Understand the orthogonal curvilinear co-ordinate system.   |
| <b>CO2:</b>   | Understand the different ways of solving first and second order differential equations.   |
| <b>CO3:</b>   | Understand charge dynamic particles and solve the Laplace and Poisson's equations.  |
| <b>CO4:</b>   | Understand the Ampares circuit law, displacement current and Biot-Savarats law.   |
| <b>CO:5</b>   | Understand and solve different medium Maxwells equations.   |
| <b>BSc. III Paper X DSC- E2 QUANTUM MECHANICS</b>                                     |   |
| <b>By the end of this Course student should be able to know about:</b>                |   |
| <b>CO1:</b>   | Understand different types of operators used in quantum mechanics and are able to use them to solve different problems.                                     |
| <b>CO2:</b>   | Understand and solve problems related to different types of potential like, Square-well,<br>Bloch wave, Kroning-Penney square periodic potential.           |
| <b>CO3:</b>   | Understand and solve hydrogen atom problem  |
| <b>CO4:</b>   | Understand the angular momentum operators & their Eigen values  |
| <b>BSc. III Paper XI DSC- E3 CLASSICAL MECHANICS &amp; CLASSICAL ELECTRODYNAMICS</b>  |   |
| <b>By the end of this Course student should be able to know about:</b>                |   |
| <b>CO1:</b>   | Students are able to understand and solve central force problems and understands the conservation of energy, linear momentum and angular Momentum in system |
| <b>CO2:</b>   | Students are able to understand how to impose constraints on a system in order to simplify the methods used in solving physics problems.                    |
| <b>CO3:</b>   | Students are able to understand the concept of special theory of relativity.  |

|   |   |
|---|---|
| <b>CO4:</b>   | Students are able to understand the concept of lagrangian and Hamiltonian transformations and are able to solve problems on lagrangian and Hamiltonian transformations. |
| <b>BSc. III Paper XII DSC- E4 DIGITAL &amp; ANALOG CIRCUITS &amp; INSTRUMENTATION</b> |   |
| <b>By the end of this Course student should be able to know about:</b>                |   |
|   | CO1: Students are able to understand basic logic gates  |
|   | CO2: Students are able to understand transistor amplifier and CRO   |
|   | CO3: Students are able to understand timer and Operational amplifier  |
| <b>BSc. III Paper XIII DSC- F1 NUCLEAR &amp; PARTICLE PHYSICS</b>                     |   |
| <b>By the end of this Course student should be able to know about:</b>                |   |
| <b>CO1:</b>   | Students are able to understand the nuclear properties  |
| <b>CO2:</b>   | Students are able to analyse the single particle nuclear shell model and related phenomena  |
| <b>CO3:</b>   | Students are able to understand and apply selection rule of elementary particles and fission, fusion reactions  |
| <b>CO4:</b>   | Students are able to understand and apply the particle accelerators and nuclear detector to solve numerical problems.   |
| <b>BSc. III Paper XIV DSC- F2 SOLID STATE PHYSICS</b>                                 |   |
| <b>By the end of this Course student should be able to know about:</b>                |   |
| <b>CO1:</b>   | Understand different crystal structures, interaction with X-ray and also understands various properties about crystals  |
| <b>CO2:</b>   | Understand different types of crystal defects.  |
| <b>CO3:</b>   | Understand different properties of semiconducting and superconducting properties  |
| <b>CO4:</b>   | Understand theoretical background of dielectric and magnetic properties of material   |
| <b>BSc. III Paper XIV DSC- F3 ATOMIC &amp; MOLECULAR PHYSICS &amp; ASTROPHYSICS</b>   |   |
| <b>By the end of this Course student should be able to know about:</b>                |   |
| <b>CO1:</b>   | Understand and apply ll-coupling, ss-coupling, LS coupling in atomic spectra and able to calculate and their selection rules.   |
| <b>CO2:</b>   | Understand Zeeman effect and Paschen-Back of two electrons, Stark effect of hydrogen and Compton effect.  |
| <b>CO3:</b>   | Understand the concepts related to various types of astronomy along with various instruments to apply it for practical purposes.  |

|   |   |
|---|---|
| <b>CO4:</b>   | Students are able to understand structure of universe, Raman spectra and of stars and stellar evaluation    |
| <b>BSc. III Paper XIV DSC- F4 ENERGY STUDIES &amp; MATERIAL SCIENCE</b> |   |
| <b>By the end of this Course student should be able to know about:</b>  |   |
| <b>CO1:</b>   | Understand Study of Solar Wind and Interaction with Magnetized Planets                                      |
| <b>CO2:</b>   | Understand Magnetosphere in the solar system and Effects of Solar activities on Technological Earth Systems |
| <b>CO3:</b>   | To understand bio energy and bio mass conversion  |
| <b>CO4:</b>   | Students are able to understand structure of universe, Raman spectra and of stars and stellar evaluation    |
| <b>CO5:</b>   | To understand nanotechnology  |

### B.Sc. Part III Physics Laboratory Experiments

|                  |   |
|------------------|---|
| <b>Group I</b>   | <p>Use resonance pendulum to determine damping coefficient of air</p> <p>Examine Surface tension of Soap solution and Mercury.</p> <p>Determine <math>\gamma</math> by Koenig's method and Cornu's method.</p> <p>Calculate <math>\gamma</math> and <math>\eta</math> of given material of Flat spiral Spring.</p> <p>Arrange Given set of numbers in Ascending/ Descending order and Find largest and smallest number from given set of numbers using C programming.</p> <p>Use SCILAB to determine eigen values and eigen vectors and to determine Inverse of matrix.</p>   |
| <b>Group II</b>  | <p>Trace cardinal points by Turn table and Newton's method.</p> <p>Illustrate Brewster's law to find refractive index of a glass.</p> <p>Examine Diffraction at single slit and at cylindrical obstacle.</p> <p>Determine wavelength of monochromatic source using LLloyd's single mirror.</p> <p>Study refractive indices for extra ordinary and ordinary rays for given prism.</p> <p>Investigate diameter of Lycopodium powder.</p> <p>Plot Caustic curve for a given thick plano convex lens to determine ratio of transverse aberration of extreme rays to radius of least confusion.</p> <p>Study absorption spectrum of given liquid Solution.</p> |
| <b>Group III</b> | <p>Assess self-inductance by Owen's bridge and mutual inductance by Ballistic galvanometer.</p> <p>Measure <math>B_H</math>, <math>B_V</math>, and <math>\theta</math> by magnetometer method.</p> <p>Determine resistance of Ballistic Galvanometer by half deflection method.</p> <p>Determine <math>e/m</math> by Thomson's method.</p> <p>Calibrate wire by Griffiths method.</p>   |

|                 |  |
|-----------------|--|
|                 | <p>Calculate absolute capacity of condenser.</p> <p>Plot I-V characteristics of Solar Cell.</p> <p>Use p-n junction Diode to calculate Band gap energy of semiconductor.</p> <p>Use LED to determine Planck's constant.</p>  |
| <b>Group IV</b> | <p>Verify truth tables of gates and De- Morgan's theorems with IC- 74 series.</p> <p>Design single stage CE using voltage divider bias, astable multivibrator and monostable multivibrator using IC -555 Timer.</p> <p>To build and Test Colpitts oscillator and phase shift oscillator using BJT.</p> <p>Measure unknown frequency and Determine AC and DC sensitivity of CRO</p> <p>Study OP-AMP as an inverting amplifier and as Schmitt trigger</p>  |
| <b>Group VA</b> | <p>Observe and calculate divergence of LASER beam.</p> <p>Use schusters method for optical leveling of spectrometer.</p> <p>Obtain biprism fringes without lateral shift.</p> <p>Measure Wavelength of LASER using plane diffraction grating and distance between two coherent sources using biprism experiment.</p> <p>Plot polar graph using photo cell.</p> <p>Use Tunnel diode to study quantum tunneling effect.</p> <p>Test electronic components.</p> <p>Edit Save and Execute given C programmes</p> |
| <b>Group VB</b> | <p>Measure Radius of capillary bore using mercury thread, Phase shift of RC network using CRO and resistance of Galvanometer using Kelvin's method.</p> <p>Estimate errors.</p> <p>Determine Lattice constants using XRD powder pattern.</p> <p>Use of half and full adder.</p> <p>Simplify digital circuit using Boolean laws.</p> <p>Wiring of electric bulb, switch and plug.</p> <p>Trace given electronic circuit.</p> <p>Assemble electronic circuit using soldering method.</p>                       |
| <b>Group VI</b> | <p><b>Assessment of Annual work of a student.</b></p> <p>Complete and certify laboratory journal</p> <p>Prepare study tour report.</p> <p>Prepare 2 seminar reports.</p>   |
