## 1. PREAMBLE:

Psychology is the scientific study of human behavior and the mental processes underlying it. It also investigates how people think, feel, and interact with each other. Psychology also applies its knowledge and research methods to various domains such as education, organization, health care, sports, and social issues. The syllabus for the first-year undergraduate course in psychology aims to introduce students to the basic concepts, theories, and applications of psychology in relation to friendship, love, personality, health, and community. The course is divided into seven papers, each covering a different aspect of psychology and its relevance to human life.

Furthermore, the curriculum emphasizes the practical application of psychological theories through internships, where students can gain hands-on experience in real-world settings, fostering a deeper understanding of how psychology contributes to societal well-being. The course is prepared according to the National Education Policy (NEP) 2020, which emphasizes interdisciplinary, experiential, and holistic learning. It will use various pedagogical methods, such as lectures, discussions, case studies, assignments, projects, and field visits, to engage students and enhance their learning outcomes. The course also aims to encourage students to reflect on their own experiences, attitudes, and values and to develop critical thinking, communication, and interpersonal skills.
